IIT Jodhpur (2022) | Top 0.1% Upraised | JEE Top 0.5 %ile | ACE Performer - Avanse

PROFESSIONAL SUMMARY

AI Product Manager with 4+ years building LLM and NLP products that work on high stakes financial and clinical documents, from claims processing and document fraud detection to denial management. Shipped to production across fintech and healthtech with results that held up: claim denial rates down ~30%, claims submission TAT down 45%, document processing TAT down 60%, and a payments platform scaled to 150K+ merchants in 9 months. Hands on builder who ships working prototypes (live LLM demos at shanitnagre.github.io) and follows a simple rule: LLMs for judgment, deterministic systems for facts, with evals and audit trails so accuracy stays defensible. Comfortable owning the platform layer end to end, from document ingestion, extraction accuracy, and retrieval quality to model selection and integrations, working directly with founders and engineers to move fast from discovery to production.

WORK EXPERIENCE

SPRY Therapeutics Pvt Ltd.		AI Product Manager	Aug'25- Present
Roles & Responsibilities	▪ Own product end to end for an AI native revenue cycle platform covering an LLM claims processing pipeline and an NLP denial management engine, working directly with engineering from discovery through production in a HIPAA regulated environment. ▪ Built the LLM Claims Processing pipeline (ingestion → structured extraction → CPT validation → denial prediction) with deterministic validation gates around LLM judgment, so the model never gets the final word on facts; claim denial rates fell by ~30% and submission TAT improved by 45%. ▪ Set up eval driven quality for every LLM output: golden datasets built from real payer documents, extraction accuracy metrics tracked release over release, and regression testing on every model and prompt change, keeping accuracy defensible on messy, multi format documents. ▪ Architected the NLP driven Denial Management engine with intelligent case routing; mined resolution patterns from historical denials so billing teams see the likely first pass fix upfront, cutting clinician admin burden by 40%. ▪ Made model and architecture calls per task rather than defaulting to one approach, weighing LLM, deterministic, and rules based options against accuracy, latency, and cost, and instrumented every pipeline with full audit trails for compliance and debugging. ▪ Defined API first service contracts and built integrations with EHR and clearinghouse systems, treating integration reliability as a product metric, not an engineering afterthought. ▪ Ran weekly discovery loops with clinicians and billing operations teams, turning what they actually struggled with into shipped features, and drove change management so adoption stuck rather than teams reverting to old habits.		
Avanse Financial Services		Senior Product Manager	Jul'24- Jul'25
Roles & Responsibilities	▪ Built a Document Fraud Detection Platform (OCR + NLP + DigiLocker) for high stakes lending documents, owning ingestion, extraction, and verification at scale; document processing TAT dropped by 60% and discrepancy incidents by 35%. ▪ Shipped an AI chatbot (ElasticSearch + NLP) for vernacular language users, a segment most lenders underserve; ticket resolution time fell by 50%. ▪ Led discovery through launch for the Customer Portal (Web and Mobile), grounding the roadmap in user research and journey mapping rather than internal opinion; onboarding completion improved by 30%. ▪ Owned product roadmaps against quarterly OKRs, tracking cost, reliability, and risk posture to force honest trade off conversations with senior leadership on what shipped and what waited. ▪ Worked RBI data governance, AML, and fraud risk requirements into the product design itself rather than bolting them on later, partnering with legal, compliance, and fraud teams from pilot through launch without slowing delivery. ▪ Earned Ace Performer recognition, awarded for consistent and measurable business impact across AI and platform initiatives.		
ICICI Bank		Product Manager	Jun'22- Jun'24
Roles & Responsibilities	▪ Launched an in house Pan India Merchant POS ecosystem from zero to 150,000+ active merchants in 9 months, and lifted merchant NPS by +15 through faster settlements and redesigned onboarding and servicing workflows. ▪ Managed the full product lifecycle for a mission critical payments platform, owning roadmap, GTM execution, and regulatory compliance, and drove ISO 20022 adoption to improve reconciliation accuracy and reporting quality. ▪ Prioritized scalability, resiliency, and stability on a platform where downtime meant merchants losing sales, working closely with engineering on capacity and reliability decisions. ▪ Tracked merchant NPS, settlement speed, and platform reliability as the operating metrics, and partnered with Analytics and BI teams to build merchant performance dashboards that leadership actually used for prioritization. ▪ Acted as the voice of the customer, spending time with merchants directly and keeping a close watch on the competitive landscape and emerging payment trends to shape the roadmap.		

ACADEMIC PROFILE

B.Tech in Biotechnology	Indian Institute Of Technology, Jodhpur (IIT Jodhpur)	9.1/10.00	2018-22
Class XII	Dinanath Junior College, Nagpur	91 %	2017-18
Class X	Podar International School, Nagpur (CBSE)	10.00/10.00	2015-16
